

Smart CCTV Investigator

User Manual - Quick Start Guide

For Law Enforcement and Cyber Cell Investigation Use

1. What This Software Does

Smart CCTV Investigator analyzes CCTV/surveillance video footage to help investigators quickly find and document evidence. It can:

- Track a specific person or vehicle across an entire video
- Automatically read vehicle number plates (ANPR)
- Detect and save clear face images of tracked people
- Search for a specific person using a reference photograph
- Automatically generate a ready-to-print PDF forensic report

2. Installing the Software

1. Download the installer file named "SmartCCTVInvestigator_Setup.exe" from the link shared with you.
2. Double-click the downloaded file to start installation.
3. Click "Next" through the setup screens, then click "Install".
4. Once complete, click "Finish". A desktop shortcut will be created automatically.

Note: No technical knowledge or internet connection is required after installation, unless you use the Face Search feature for the very first time (a small one-time download happens then).

3. Opening the Application

Double-click the "Smart CCTV Investigator" icon on your Desktop, or find it in the Windows Start Menu.

4. Step-by-Step: Analyzing a Video

1. Click "Select Video" and choose the CCTV footage file from your computer.
2. (Optional) If the video is dark, blurry, or sideways, tick the relevant option in the "Video Enhancement" panel (Denoise, Sharpen, Auto Brightness, or Rotate).
3. Choose what to track from the "Target Object Class" dropdown - for example "person" or "car".
4. Click directly on the frame to select the specific person or vehicle you want to follow through the video.
5. (Optional) To search for a specific person, click "Browse Reference Photo" under the Face Search panel and select a clear photograph of the person.
6. (Optional) Tick "Enable Duplicate Face Removal" if you want the tool to automatically group repeated sightings of the same person.

7. Click "Start Tracking & Generate Report" and wait for processing to finish. Progress is shown on screen.

8. Once complete, a summary popup appears. Click "Open Output Folder" to view your results.

5. Understanding Your Results

After processing, a results folder is created containing:

- forensic_report.pdf - the complete printable report for case files
- evidence_frames/ - individual frames showing the tracked subject with a marked box
- face_evidence/ - clear, enhanced face images suitable for identification
- detections_log.csv - a raw data log, viewable in Excel

6. Frequently Asked Questions

Does this software need the internet to work?

No, once installed it works fully offline. The only exception is the very first use of the Face Search feature, which downloads a small recognition model one time.

Is my original video file changed in any way?

No. Your original video is never modified. All enhancement happens on a temporary working copy, and the original file remains untouched.

What if the window looks too small or some buttons are missing?

The window can be resized and scrolled - use your mouse wheel inside the application window to scroll down and see all panels and buttons.

Who do I contact for support?

Please contact your department's technical point of contact, or the developer who provided this software, with a description of the issue and, if possible, a screenshot.
